PHYSICAL AND CHEMICAL HAZARDS

Keep container tightly closed. Product must remain completely dry to retain insecticidal values.

DIRECTIONS FOR USE:

by map, spange or dampened doth.

JT EATON™ KILLS BEDBUGS and CRAWLING INSECTS POWDER™
kills insects by absorbing the fluids right out of their body! Insects
dry-up . . . and die! It is a violation or rederal law to use his product in a manner inconsistent with its labeling. APPLY ONLY TO LAPY SURFACES. May be used by Pest Control Operators. Excess product may be removed

GENERAL DIRECTIONS: JT EATON™ KILLS BEDBUGS and CRAWLING INSECTS POWDER™ contains Silicon Dioxide material composed of millions of minute, fossilized single-celled aquatic plants known as diatoms which were deposited in the earth's crust millions of

kills insects by abrasively removing and breaking down the oily protective membrane which covers the insects body, legs, and other moving parts. Death results from dehydration (chying out), because it absorbs up to 50% of the insects fluids: An insect's body is approximately 65% water and when as little as 30% dehydration occurs the insect will die. Without water to replace such losses, domestic species of cockroaches and ants die within 1 to 2 days. With JT EATONI™ KILLS BEDBUGS and CRAWLING INSECT'S POWDER™ there is an initial kill followed by the gradual, steady kill of the remaining insects. It remains effective until depleted and will continue to kill insects as long as the product stays dry. ATS AGO.
